

Xplorer GPS App Quickstart Guide

You've got your route – now let's hit the trail!

Download the app

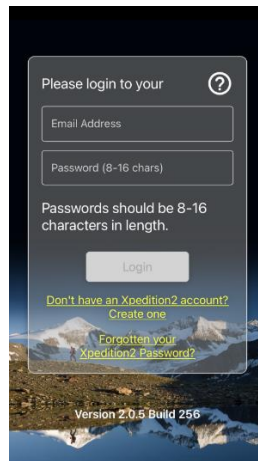

Download the Satmap Xplorer GPS app to your phone (and up to four other devices). The app is available from:

Incidentally, if you have used Satmap Active devices, much of the layout and functionality may be familiar to you.

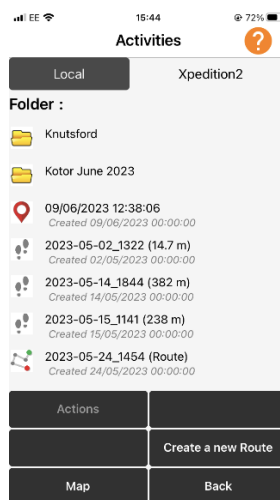

Login

Login using the same email address and password as your Xpedition2 account. By using the same login you can access the routes and tracks in your Xpedition2 account. You will remain logged in until you choose to log out.

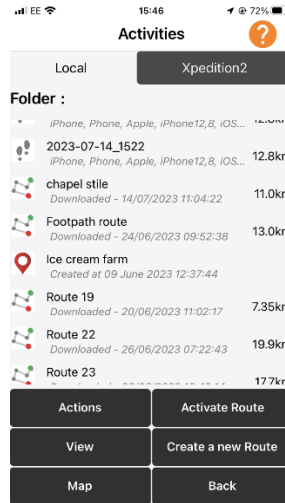

View Your Activities

Select Activities either by using the Main Menu/Other (three lines in top left of screen), or clicking the pages button (bottom right of screen) until Activities appears as an option. View the routes you have created in Xpedition2 by clicking the Xpedition2 tab, so the tab and list show in white.

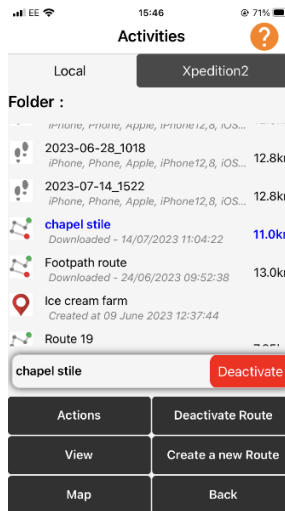

Download a Route

Select your chosen route and click Download Route. This downloads your route onto your device, allowing you to navigate via gps, without the need for a mobile signal. Your route will now appear on the Local tab. Select the Local tab so the tab and list show in white. If you don't see the name of your route, check the date and time of routes in the Local list. (To edit the name of your route, click and hold on your route details and select Edit Name in the pop up list.)

Activate a Route

Select your chosen route in the Local list and click Activate Route. This will remain your active route until you choose to deactivate. Select Map and scroll the map to the location of your route if necessary.

Start your Activity

Start route by clicking the Pause status button at the top right of the screen to change your status to the green active button.

Map/Zoom Level

To Zoom in/out use either a two finger pinch on the touchscreen or the + and – symbols at bottom right of the screen. As you pass within the visible zoom range of a particular map (eg OS 250k, OS 25k, Adventure 25k or Street View 10k) the visible map may switch automatically or be toggled using the button third from bottom left of the screen. The maps available depend on the current level of zoom, and the free/subscribed/purchased map packs installed for that location.

Adventure Map 1:25k

OS Map 1:25k

If you need a different type or scale of map, go to My Maps. Premium subscribers can install OS maps free of charge from the Subscriptions tab. Other users may purchase additional maps using tokens, then install from the Owned tab.

Pause/Restart your Activity

Use the status button in the top right of the screen to change status between (orange) paused and (green) active.

Save your Activity

This saves the date, time and exact route you travelled on a particular occasion (rather than the route you set out to do). When you have finished your activity, and whilst the green active status shows, use the Main Menu (three lines in top left of screen), and select Stop, Save and Clear to see your track listed with the footsteps icon in your Local list.

OR

Select Actions to see your Trip Log Options. Here you choose combinations of:

- Save (keep your track on the Local list on your phone)
- Upload (save your track to your Xpedition2 list which will be accessible via your online Xpedition2 account)
- Continue (carry on recording your activity)
- Share (create a gpx or tpx file and choose to share via WhatsApp, text, email, Airdrop etc)
- Convert to Route (create a route to follow at a later time)

Return to Activities and Deactivate your route.

The activities uploaded via Xplorer will synch with your Xpedition2 account, ready to view and manage when you're next online.

Now, what's your next Xpedition!?
